SUMMARY

Backend engineer and CTO who builds multi-tenant SaaS on AWS. I built Owly CRM, a sales platform used by Colombian real-estate developers, from the first commit to production: Django and PostgreSQL at the core, real-time features over WebSockets, integrations with a construction ERP and a mortgage bank, and applied AI. Before that, two years building lending software as a backend engineer. Economist and former investment analyst: I build for the business outcome, not just the ticket.

EXPERIENCE

OWLY SAS — Chief Technology Officer

Oct 2025 – Present

Multi-tenant CRM SaaS for real-estate developers · Bogotá

- Architected and built Owly CRM from zero: Django 4.2 / DRF, PostgreSQL 16, Redis and Celery across 40 modular apps, with a React + TypeScript frontend. Shipped the first production deploy on AWS in three days.
- Designed tenant isolation for every customer's data: a tenant-aware base model and scoped API layer, enforced by a CI check that fails the build if any endpoint ships without tenant scoping.
- Built zero-downtime deployments on ECS Fargate: migrations run before new tasks take traffic, failed deploys roll back automatically, and a CI gate blocks backward-incompatible schema changes (expand/contract).
- Integrated SINCO, a construction ERP (154 endpoints, two-way sync of units, sales and payments), and Davivienda's mortgage platform (mutual TLS, AES-GCM payload encryption, OAuth, plus an inbound API for the bank's presale results).
- Replaced 5-second polling (12 requests/min per open tab) with WebSockets (Django Channels + Redis) for notifications and internal chat, taking that load off the API.
- Cut the heaviest list views from ~17 s to under 1 s: removed N+1 queries, paginated by ID and fixed Postgres planner traps (JIT on annotated EXISTS, unnecessary DISTINCT).
- Shipped ML lead scoring (scikit-learn), LLM and voice agents (Claude, OpenAI, ElevenLabs) exposed over MCP, and the financial engines behind quotes: tiered commissions, discounts and housing-subsidy eligibility.

MO Technologies — Backend Developer II

Nov 2023 – Sep 2025

Credit-management platform: loans, payments and user administration · Promoted from Backend Developer in Sep 2024

- Built and maintained Python / Django microservices on AWS (S3, EC2, Lambda) with PostgreSQL, Docker and GitLab CI/CD.
- On the credit core for a Colombian digital bank, caught an interest-capitalization defect (interest charged on unpaid interest, illegal in Colombia) that an external compliance review had missed. Escalated it with the numbers; it was fixed before launch, with zero customers affected.

INVIAS (National Roads Institute) — Python Developer

Jan 2023 – Oct 2023

- Built a Flask reporting tool that ingests an external JSON API and exports filtered reports to PDF and CSV.

EARLIER CAREER — FOUNDER AND FINANCE

- **Veci — Co-founder & CEO** (2018–2022): app-based neighborhood commerce. COP 100M in sales in the first 8 months; backed by iNNpursa, Colombia's innovation agency. Also co-founded Fit your Food and A la Casa.
- **Authentic Trust — Co-founder & CEO** (2015–2016): real-estate project structuring, valuation and debt.
- **Corpbanca Investment Banking — Investment Analyst** (2014–2015): financial models, due diligence and investment-committee presentations.

SKILLS

Backend: Python, Django, Django REST Framework, Celery, Django Channels (WebSockets), REST API design, pytest

Data: PostgreSQL (query tuning, pgvector), Redis, PgBouncer

Cloud & DevOps: AWS (ECS Fargate, RDS, ElastiCache, S3, CloudFront, SES, Secrets Manager, CodePipeline), Terraform, Docker, CI/CD

Frontend: React, TypeScript

AI / ML: LLM agents (Claude, OpenAI), MCP, voice agents (ElevenLabs), scikit-learn

Domain: lending and fintech, ERP and banking integrations, financial modeling

EDUCATION

B.A. Economics — Pontificia Universidad Javeriana, Bogotá (2010–2015)

Continuing education in Python, Django, AWS and frontend development — Platzi (2022–present)

LANGUAGES

Spanish (native) · English (professional working proficiency)
