

CQ

Camilo Quintero Rodríguez

Chief Technology Officer (CTO) · Python · Django · AWS · System Architecture

PROFESSIONAL PROFILE

As Chief Technology Officer at OWLY SAS, I lead the architecture and backend engineering of Owly CRM, a multi-tenant real-estate intelligence SaaS. I design scalable, secure server-side systems with Python, Django REST Framework, PostgreSQL, Redis and Celery, paired with a React and TypeScript frontend. My work spans multi-tenant architecture, real-time systems (WebSockets), ERP and banking integrations (SINCO, Davivienda), ML-based lead scoring, and cloud infrastructure on AWS (ECS Fargate, Terraform, CI/CD). With a foundation as a Backend Developer II and a background in Economics, I bridge deep technical execution with business strategy.

TECHNICAL SKILLS

PROFESSIONAL EXPERIENCE

Chief Technology Officer (CTO) — OWLY SAS (Owly CRM)

2024 – Present

Lead the technical strategy and architecture of Owly CRM, a multi-tenant real-estate intelligence SaaS. Designed the backend from the ground up with Django 4.2, Django REST Framework, PostgreSQL 16, Redis and Celery across 30+ modular apps. Architected the multi-tenant core (ORM-level tenant isolation) and a real-time layer with Django Channels and Daphne (WebSockets) for live quote collaboration, omnichannel messaging (WhatsApp/Email/SMS) and notifications. Built major integrations: a SINCO ERP connector (150+ endpoints) and a Davivienda mortgage-bank integration. Implemented ML-based adaptive lead scoring (scikit-learn) and an AI agents platform (Anthropic Claude, OpenAI) with ElevenLabs voice agents. Owned the AWS infrastructure (ECS Fargate, S3, SES, CloudFront) provisioned with Terraform and shipped through CI/CD (GitHub Actions / AWS CodePipeline). Designed financial engines: a commission tier system and an opportunity-cost quote-discount engine.

Backend Developer II — MO Credit Management Platform

Previous Role

Specialized in the development and maintenance of backend systems using Python and Django, focusing on microservices architecture. Responsible for integrating AWS services (e.g., S3, EC2, Lambda) for scalable solutions. Managed PostgreSQL databases, ensuring data integrity and performance. Implemented and maintained CI/CD pipelines with GitLab for automated testing and deployment. Utilized Docker for containerization, streamlining development and deployment processes. Actively participated in Agile sprints, project planning, and task management using Jira.

Web Application Developer — CERAC

Previous Role

Developed a web application for CERAC using Flask, integrating user authentication, database operations, and form management. The application allows for user, survey, and question management.

ICT Developer — INVIAS

Previous Role

Led the management of ICTs and geographic information systems at INVIAS, applying advanced data analysis and visualization techniques. Developed a report generator using Flask, HTML, CSS, and JavaScript, allowing users to customize reports and export them in various formats.

EDUCATION

Online Tech Education — Platzi

2022 – Present

Courses in Python, Django, AWS, Frontend Development (HTML, CSS, JS), and other backend technologies.

Economist — Pontificia Universidad Javeriana

2010 – 2015

Bachelor's Degree in Economic and Administrative Sciences.
